

How large can you go?

We can take any 4"x6" photo, negative or digital file and blow it up as large as you would like. The only limit we have is that our printer can only handle rolls of canvas 44" wide. If we are stretching the canvas for you, we need two inches on each side of the canvas, making the largest size stretched canvas 38" by as long as you need.

Our equipment is state of the art for enlarging images. We use high quality Epson printers and Epson branded UltraChrome inks, rated to last 100 years.

What is your turn around time?

Turn around time varies depending on work load. Our process involves spraying each canvas with a UV inhibitor which must dry overnight before stretching. So if you need a rush order, in some instances we can get it out in just one day. Extra charges may apply in rush jobs.

Do you offer discounts?

We believe our prices are the most competitive.

Will my image be pixilated?

Absolutely not! As long as we start with a large enough image, usually 4"x6" at 300dpi, we can make it as large as you like.

What is gallery wrap?

Gallery Wrap is the process of wrapping the printed canvas around a custom made stretcher frame. The image is wrapped around the frame for a clean, modern look. If there is not enough picture to stretch, have no fear, we will digitally stretch the image so it wraps around the edges without hurting the integrity of the image. All work is done with our critical eye. We will not print an image if we don't think it is going to turn out perfect.

Can I get a print on canvas without a frame?

Not a problem. We can print out just the canvas and roll it up. We do recommend having us stretch the canvas on a frame though. We are experts at it and if we ruin it...we reprint it!

What are my options for framing?

If we stretch the canvas for you and use the gallery wrap process, you will not need an extra frame! That means you save money on your art work. No more expensive custom frames to buy. Just take it out of the box and hang it on your wall.

What is the process for printing?

We use Epson printers and Epson Ultrachrome inks for all of our prints. The inks will not fade for generations. It is rated to last 100 years. We also apply a UV inhibitor to seal most prints.

The coating also allows for better stretching. It gives the canvas an elastic quality that allows us to stretch it around the frame.

What size file do you need?

We can work with most file sizes that are 300 dpi. If we think the file is too small, we will let you know before printing. We open every file in Photoshop to check size and dpi before printing. Your pictures are safe with us!

What types of files can you use?

We can use most any graphic file such as tiff, jpeg, bmp, eps. If you have a question about a file type, feel free to e-mail or call us for more information.

What if I don't have a digital file?

You can always give or mail us the physical print. We can scan the image for you for a slight fee. We will waive the fee if you order two or more prints.

Do you work with professional photographers?

Yes! We work with professional photographers and artists every day. We offer a loyalty program for frequent purchasers.

Refers to the way the image "wraps" around the sides of the supports and is stapled. This is a finished look allowing it to be hung with out a frame.
